

Helping You Build Affordable Green Comfort Since 1958.

#9 Mastic® was the first water-borne, environmentally friendly air duct sealant over 40 years ago and is preferred by contractors installing rigid fiberglass duct board systems. It contains ceramic micro-spheres for extreme performance and is easily applied by brush or trowel; can be sprayed or extruded with proper equipment.

RCD #34 Coil & Fin Cleaner® cuts through dirt, grease, and other debris found in evaporator and condensing coils. Its foaming action provides excellent vertical hold which liquefies and drains within minutes. This product cleans permanent air filters and electronic air cleaners too.

RCD #72 Industrial Hand Cleaner® contains fine pumice, skin conditioners and an antiseptic ingredient. It tackles the tough dirt, prevents chapping, is biodegradable and has a fresh scent. It does NOT contain d-limonene, lanolin or harmful solvents.

#15 Weather Barrier Coating® is a bright white elastomeric coating for protecting air ducts and thermal insulation exposed to the weather. It prevents degradation of closed cell foam insulation on line sets, provides years of service as a lagging adhesive, and reflects solar radiation as a roof coating. Easily applied by brush, roller or spray equipment.
